

Attending Physicians,

_____ is part of the CVCA missions team that will be traveling to the Dominican Republic May 29th- June 5th, 2023. The team will be traveling to Hato Mayor, Dominican Republic. We have listed the pertinent information about the site below, along with our suggestions about immunization. After reviewing the information, please complete the second sheet for our H & P records. **THE STUDENT MUST RETURN THIS HISTORY AND PHYSICAL FORM TO CVCA BY MARCH 14th, 2024.** If you have any questions, please contact LT Newland at (330) 929-0575, ext. 521.

LOCATION: Hato Mayor, Dominican Republic is a mid-sized city in the DR with a blend of urban and rural elements. Our team will be working in the Haitian villages located in the larger sugar cane fields.

WORK: The team will be doing a fair amount of manual work including light construction (ex: block work, digging trenches, heavy gardening, painting) and will be conducting 3-5 day clubs for the village/school children.

WATER SUPPLY: All of the CVCA team will be housed at the “Meeting God in Missions” compound, which uses treated well water for washing. Bottled water is used exclusively for cooking and drinking.

DORMS: The team is all housed in the compound, which is a block building with cement floors. The windows in the sleeping quarters are barred and the facility is well secured. Students will be sleeping on bunk beds, off the floor.

RAINFALL: The rainfall can vary quite a bit -- some years it rains every afternoon for several hours, while other years it may never rain while we are there.

BATHING: All bathing will occur in the compound’s ample shower facility with water from the well. Handwashing stations are set up for hand washing throughout the day. Anti-bacterial wipes and Purell hand soap are used extensively.

KITCHEN FACILITIES: All cooking will be handled by a group of Dominican women who cook regularly for large groups of American visitors – usually physicians and medical support personnel involved in running temporary clinics throughout Haiti and the Dominican Republic.

BATHROOM FACILITIES: Full facilities are in place with sinks and flush toilets for both men and women.

MOSQUITO CONTROL: Garbage is collected regularly. The students are advised to bring insect repellent with high DEET levels during the course of the day.

IMMUNIZATION SUGGESTIONS: (attached Doctor recommendations)

MEDICAL STAFF: The team will include two Medical doctors.

Sincerely,

LT Newland
Director of D.R. Missions Trip
